DETAILED ACTION***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

The closest prior art is EP 0875889A1 (herein referred to as Daems) and Posey-Dowty et al (US 5,994,530). Daems teaches a substrate having a thin metal material applied thereto (page 4, line 4). The metal layer is applied via an aqueous solution and comprises metal particles having a size of 5-300nm (page 4, line 48) and a binder such as cellulose or a cellulose derivative (page 4, line 15). Posey-Dowty teaches that carboxymethyl cellulose ester of higher acids treated with ammonia or amine are excellent for dispersing metal particles and have a high viscosity (see page 4, line 14 of Daems).

The claims are allowable over the prior art because the prior art fails to teach or render obvious the claimed invention wherein the binder comprises a N-quaternized cellulose. Specifically, neither Daems nor Posey-Dowty teaches an N-quaternized cellulose. The ammonia treated cellulose taught in Posey-Dowty does not read on the claimed N-quaternized cellulose as explained in pages 8-11 of Applicant's Appeal Brief filed March 22, 2004. Furthermore, the prior art as a whole would not have motivated one of ordinary skill in the art to select N-quaternized cellulose as a binder for a dispersion of metal or metal alloy particles.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
